

GARVIT

PERSONAL PROFILE

Name: Garvit Pujari
Date of Birth: 20 May 2006
Residence: Vaishali, Ghaziabad
Email: garvitpujari98@gmail.com
Contact: 9310723510
LinkedIn: <https://www.linkedin.com/in/garvit-pujari-919774328/>
LeetCode: <https://leetcode.com/u/garvitpujari/>

EDUCATION

B.Tech in Computer Science and Engineering, Maharaja Agrasen Institute of Technology (MAIT), 2024–2028. CGPA: 9.03.
Class 12 — Modern School, Vaishali, CBSE: 91.8%.
Class 10 — Modern School, Vaishali, CBSE: 96.6%.

TECHNICAL SKILLS

Python, C, C++, JavaScript, HTML, CSS, React, FastAPI, Machine Learning, Deep Learning, Computer Vision, PyTorch, YOLO, Generative AI, LLMs, RAG, LangChain, LangGraph, Agentic AI, Hugging Face, Streamlit, Docker, FAISS, embeddings, vector databases, Git/GitHub.

EXPERIENCE

Experience in AI/ML, Computer Vision, Generative AI, RAG systems, LLM applications, model deployment, and AI-powered application development.

INTERNSHIPS

1. Zenthos — AI/ML Intern

November 2025 – January 2026 | Stipend: ₹10,000/month

Worked on Jewellery Theft Detection and Video Intelligence using MambaVLT, VideoMambaPro, and CNN-based approaches. Prepared datasets and completed VideoMambaPro training on a T4 GPU using Kaggle, producing a .pth model file. An annotation-format mismatch with CNN requirements was identified.

2. DRDO — DRISHTI AI

Institute for Systems Studies & Analyses, DRDO, Metcalfe House, Delhi

10 June 2026 – 1 August 2026

DRISHTI AI (Drone Recognition, Intelligence, Surveillance, Trajectory & Hazard Identification) was a computer-vision pipeline for drone detection, tracking, trajectory prediction, and threat assessment. It combined YOLOv11, ByteTrack, and LSTM. The DUT Anti-UAV Tracking dataset was used with 20 videos, 123 unique track IDs, and 20,799 tracked records, along with non-drone COCO negatives. Anti-UAV and AU-AIR were also explored; AU-AIR was not used because its visual perspective did not match the target problem. Trajectory prediction used 20 past frames with 9 features per frame to predict 5 future positions. The LSTM used hidden size 128, 2 layers, dropout 0.3, MSE loss, AdamW, ReduceLROnPlateau, mixed precision, and gradient clipping, with a best reported validation loss of approximately 0.0042. Threat assessment considered motion, direction, trajectory trends, proximity to restricted or sensitive zones, and predicted movement. The workflow achieved stable YOLOv11 + ByteTrack tracking and was demonstrated in a Hugging Face prototype. A key lesson was the importance of dataset alignment with the actual visual

problem.

PROJECTS

1. Placement AI / AI Career Assistant

An AI-powered career assistance platform for resume analysis, AI interviews, coding interviews, technical interviews, and career assistance. It supports live interaction, dynamic and follow-up questions, response analysis, and feedback.

2. Wave Cleanup

An environmental computer-vision project using YOLOv8 to detect approximately 40 waste classes, with hotspot mapping and live map visualization for cleanup planning.

AI & COMPUTER VISION

Experience with object detection, multi-object tracking, trajectory prediction, threat assessment, video understanding, YOLO-based systems, PyTorch, and computer-vision model deployment.

GENERATIVE AI & RAG

Experience building RAG systems using document loaders, text splitting, embeddings, FAISS vector databases, retrievers, LangChain, LangGraph, Hugging Face embeddings, ChatGroq, and LLM applications.

DSA & CODING

Regular practice in Data Structures and Algorithms using C++. Topics include arrays, binary search, stacks, queues, trees, recursion, dynamic programming, and problem-solving techniques.

LeetCode: <https://leetcode.com/u/garvitpujari/>

HACKATHONS & EXTRACURRICULAR

Participated in hackathons including GTB4EC and BVIMR as part of Team DeepCoders. Volunteered at a blood donation camp, organized sports events, helped manage a family wedding, and participated in the MAIT AWS Students Chapter.

CAREER & TECHNICAL INTERESTS

Artificial Intelligence, Machine Learning, Computer Vision, Generative AI, Agentic AI, LLM applications, RAG systems, AI agents, and practical deployment of AI systems.
